

# NEWS

Whether during a team meeting, a shopfloor meeting or during the lunch break, it can always be necessary to communicate general information to the workforce as simply, quickly and widely as possible. The monitors of the LISA system can be used as a central point of contact in the production area, offering a convenient way to publish the latest notices and information via the news function: In the manner of a news ticker, these are presented in text form on a ticker tape that is located at the bottom of the screen and runs horizontally from right to left through the image. In this way, the display of KPIs is not interrupted and a speedy dissemination of information can still be ensured.

## Additional core module: News

Don't miss any more training instructions, bring your safety requirements up to date and don't forget any more audit dates. A witty saying or a life lesson will lift your spirits and ensure a motivated start to your shift.

### AT A GLANCE
