

# VIDEO CONFERENCE

Especially in the Corona year 2020, increasing networking in everyday working life has also had an impact on the personnel side and has once again caused the demand for digital communication solutions to grow strongly. The need to exchange information about the latest innovations in the company, regardless of location and time, was intensified during the pandemic. Training courses and workshops now had to be offered at a distance and, finally, home office options had to be further expanded. We met this demand in shop floor management by adding new functions to our LISA system.

## Additional core module: Video Conference

Create new meetings (video conferences) or join a bursting meeting. For each meeting, you can give other participants, including external people, access to the meeting via a QR code.

### AT A GLANCE

Release: 2021

#### Location-independent:

Participation possible from anywhere in the world

**Time flexibility:** Less time loss due to preparation, travel distance and coordination

**Implemented in LISA:** No additional VC software necessary

**Server from Germany:** German or European data protection guidelines apply

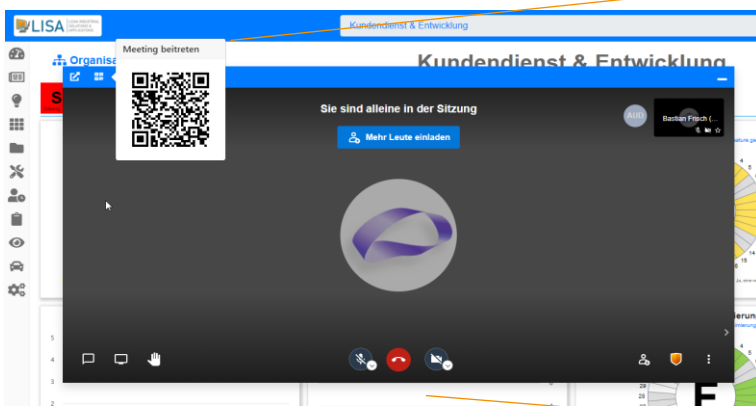

**Hardware requirements:** Camera + microphone and speaker on board

Powered by

Status: April 2023

Easy to join, also through QR code

Quickly findable, since board bounded

intuitive operation
